- Provides a quick and effective way to review large content areas

Core Topics Covered in AQA Physics: Summary Questions and Answers

This section breaks down the essential physics topics, providing example questions and succinct answers that students can use for revision.

1. Energy and Motion

Q1: What is kinetic energy, and how is it calculated?

A: Kinetic energy (KE) is the energy an object possesses due to its motion. It is calculated using the

formula: $KE = \frac{1}{2} m v^2$ where m is the mass in kilograms and v is the velocity in meters per second.

Q2: Describe the principle of conservation of energy. A: The principle of conservation of energy states that energy cannot be created or destroyed; it can only be transferred from one form to another. For example, in a falling object, potential energy converts to kinetic energy.

2. Forces and Motion

Q3: What is Newton's second law of motion? A: Newton's second law states that force equals mass times acceleration ($F = m a$). This means that the force acting on an object is proportional to its mass and the acceleration it experiences.

Q4: How does friction affect moving objects? A: Friction opposes motion between surfaces in contact. It can slow down or stop moving objects and converts kinetic energy into heat. Friction is a force that acts parallel to the surfaces in contact.

3. Electricity

Q5: What is Ohm's Law? A: Ohm's Law states that the current flowing through a resistor is directly proportional to the voltage across it, provided temperature remains constant. The formula is: $V = I R$ where V is voltage, I is current, and R is resistance.

Q6: How do series and parallel circuits differ? A: In a series circuit, components are connected end-to-end, sharing the same current but dividing the voltage. In a parallel circuit, components are connected across the same two points, sharing the same voltage but dividing the current.

4. Waves and the Electromagnetic Spectrum

Q7: What are the properties of transverse waves? A: Transverse waves have oscillations perpendicular to the direction of energy transfer. Examples include light and water waves. They exhibit properties such as wavelength, frequency, and amplitude.

Q8: What is refraction? A: Refraction is the bending of light as it passes from one medium to another due to a change in speed. It is governed by Snell's Law.

5. Matter and Atomic Structure

Q9: Describe the structure of an atom. A: An atom consists of a nucleus made of protons and neutrons, surrounded by electrons orbiting in shells. Protons are positively charged, neutrons are neutral, and electrons are negatively charged.

Q10: What is radioactive decay? A: Radioactive decay is the process by which unstable nuclei emit radiation (alpha, beta, or gamma particles) to become more stable. It is a random process with a characteristic half-life.

Sample AQA Physics Summary Questions and Answers for Practice

Below are some typical questions students might encounter, along with their concise answers to facilitate effective revision.

Question 1: Calculate the kinetic energy of a 0.5 kg ball moving at 4 m/s. Answer: $KE = \frac{1}{2} m v^2 = \frac{1}{2} \times 0.5 \times 4^2 = 0.25 \times 16 = 4$ Joules.

Question 2: Explain how increasing resistance affects current in a circuit at constant voltage. Answer: Increasing resistance decreases the current according to Ohm's Law ($I = V/R$). As R increases, I decreases.

Question 3: Describe the process of conduction in metals. Answer: Conduction in metals occurs when free electrons in the metal's lattice vibrate and transfer energy, allowing electrical current to flow easily through the material.

Question 4: How does the wavelength of a wave affect its energy? Answer: Generally, shorter wavelengths have higher energy, while longer wavelengths have lower energy. This is especially true in the electromagnetic spectrum.

Question 5: What safety precautions should be taken when working with radioactive materials? Answer: Use shielding (like lead or concrete), minimize exposure time, maintain distance, and wear protective clothing and dosimeters to monitor radiation exposure.
