- Reference the necessary assemblies (`Microsoft.Xrm.Sdk.dll`, `Microsoft.Crm.Sdk.Proxy.dll`).
- Implement the `IPlugin` interface.
- Register the plugin using the Plugin Registration Tool or through the SDK.

Sample plugin outline:

```
``csharp
public class SamplePlugin : IPlugin
{
    public void Execute(IServiceProvider serviceProvider)
    {
        // Obtain the execution context
        IPluginExecutionContext context =
            (IPluginExecutionContext)serviceProvider.GetService(typeof(IPluginExecutionContext));
        // Obtain the organization service
        IOrganizationServiceFactory factory =
            (IOrganizationServiceFactory)serviceProvider.GetService(typeof(IOrganizationServiceFactory));
        IOrganizationService service = factory.CreateOrganizationService(context.UserId);
        // Your logic here
    }
}
```

Common use cases: Data validation, Automated record updates, Integration triggers.

2. Creating Custom Workflows

Workflows automate business processes and can be configured using the Dynamics CRM workflow designer. For advanced customization, custom workflow activities can be developed.

Developing custom workflow activities:

- Create a class library project.
- Reference the SDK assemblies.
- Derive from `CodeActivity`.
- Implement the `Execute` method.

Sample custom workflow activity:

```
``csharp
public class SampleWorkflowActivity : CodeActivity
{
    protected override void Execute(CodeActivityContext context)
    {
        // Workflow logic
    }
}
```

3. Building Web Resources

Web resources include HTML, JavaScript, images, and other files used to customize forms and views.

Tips for effective web resource programming:

- Use JavaScript for client-side validation and dynamic UI updates.
