Sample Practice Questions and Solutions To illustrate the types of questions you may encounter, here are some sample problems with explanations.

Sample Question 1: Algebra in a Classroom Context If a teacher has 3 classes with 25, 27, and 30 students respectively, what is the average number of students per class?

Solution: Total students = $25 + 27 + 30 = 82$. Number of classes = 3. Average = $82 \div 3 \approx 27.33$ students.

Teaching Tip: Use this problem to discuss data representation and the importance of averages in classroom planning.

Sample Question 2: Geometry Application A rectangular classroom has a length of 20 meters and a width of 15 meters. What is the area of the room?

Solution: Area = length $\times$ width = $20 \times 15 = 300$ square meters.

Teaching Tip: Relate this to measuring classroom space and planning layouts.

Sample Question 3: Data Analysis The test scores of a class are: 85, 90, 78, 92, 88, 76, 95. What is the median score?

Solution: Arrange scores in order: 76, 78, 85, 88, 90, 92, 95. Median is the middle value: 88.
