 - Multiplication Principle:** If one action can be performed in (a) ways and a second action in (b) ways, then both actions can be performed together in $(a \times b)$ ways.

Permutations and Combinations:

 - Permutations:** Arrangements where order matters. Number of permutations of (n) objects taken (k) at a time: $P(n, k) = \frac{n!}{(n - k)!}$
 - Combinations:** Selections where order does not matter. Number of combinations of (n) objects taken (k) at a time: $C(n, k) = \frac{n!}{k!(n - k)!}$

Applications: Scheduling, cryptography, voting systems, and resource allocation.

Theory Graph theory studies networks of nodes (vertices) connected by edges, offering tools to analyze relationships and pathways.

Basic Definitions:
