Documenting the incident and adjusting procedures to prevent future contamination would be part of my approach.

b. You are tasked with designing an experiment to test the efficacy of a new antimicrobial agent. What factors would you consider?**Sample Response:**I would consider selecting appropriate bacterial strains, including resistant and susceptible ones. Establishing standardized inoculum sizes, choosing relevant growth media, and determining optimal incubation conditions are crucial. Controls?both positive and negative?must be included. I would also plan to measure MIC

(Minimum Inhibitory Concentration) and MBC (Minimum Bactericidal Concentration), ensuring replicability and statistical validity.

c. How would you handle a situation where your experimental results contradict established literature?

Sample Response: I would verify my procedures, repeat experiments if necessary, and ensure data accuracy. Comparing my methodology to that of the literature helps identify differences. If results are reproducible, I would analyze potential reasons for discrepancy, such as strain differences or environmental factors, and consider publishing or discussing findings to contribute to scientific understanding.

Behavioral and Soft Skills Questions

Employers also want to gauge your interpersonal skills, teamwork, and motivation.

a. Describe a time when you had to work under pressure in the lab. How did you handle it?

Sample Response: During a critical experiment with tight deadlines, I maintained focus by prioritizing tasks, staying organized, and communicating effectively with team members.
